The Population Dynamics Phenomenon

The Role of Emerging Giants: China, India and Brazil

Prof. Oskar Kayasan*

Abstract

The current dilemma of population dynamic on international geopolitical impact is examined. International power is now shifting towards large emerging countries such as China, India and Brazil. This paper has examined the sustainability of the population dynamics from internalisation perspectives. In particular focus on whether the current state of global power can be reshaped by population dynamics to enhance sustainability of emerging countries. Internalisation is one among many factors requiring attention by economic and social actors today this is also applies to population dynamics. Since Levitt's (1983), seminal article, globalization has become a dominant tools of academic study. In a dynamic manner, I would argue that debate on globalisation can be classified in three schools of thoughts. I) number of analysis such as Hirst, Thomson and Negri are simply sceptical to the concept, as seeing globalisation is primarily an ideological construction; a convenient myth II) others led by economists such as Dicken and Rodrik, which are relatively favoured in the public discourse, sees globalisation is economic process, III) finally, Held, Giddens, Castells and Scholte sees instead globalisation is multifaceted social process (Held & McGrew, 2003). Today emerging giants as China, India and Brazil presents multifaceted sustainability issues that appears to be become contradictory and complementary between globalisation and population dynamics. Some analysts variously described as globalisation theorists, population dynamics is directly linked into progress to globalisation. Others, instead relating the two phenomena represent a conceptual and empirical mistake. However, this study present comparative nature of their relationship by examining: i) various theoretical debates underpinning both the concepts, ii) explaining the new forms of development patterns as a response and reaction to globalisation forces, iii) finally, try to offer a different perspective of how the interplay between two phenomena can have profound impact on the concept sustainability. This paper attempts to address the sustainability of population dynamic of emerging large countries in globalisation phenomenon. This paper shows that the contradiction and intruding circumstances does reflect a coherent strategy that is likely to continue, or reflect more often contradictory goals for both powers in the world.

Keywords: Internalisation, population dynamics, emerging countries, giants, sustainability.
